Nathaly Shige

Stanford, CA | nathalyshige@stanford.edu | linkedin.com/in/nathalyshige | github.com/nathalyshige | nathalyshige.com

AI engineer and product builder specializing in agent harnesses and recommendation systems, from user research to production.

EDUCATION

Stanford University — Stanford, CA
B.S. in Product Design and Computer Science · GPA 3.4/4.0 — Expected Jun 2027
- Machine learning for beauty project in Andrew Ng's course (see Projects); Lean Launchpad, Stanford GSB (20% acceptance); Research Assistant, Center for Educational Entrepreneurship and Innovation

Etec Martin Luther King CPS — São Paulo, Brazil
Technical Degree in Business · GPA 4.0/4.0 — 2022
- Fundação Estudar Fellow (26 of 46,000); 1st Place, JA & Dell Startup Award; Bronze Medal, Brazilian Investments Olympiad (2,500+ competitors)

EXPERIENCE

Renude — Remote
AI Engineer & Product Intern — Jul 2026 – Sep 2026
- Engineered the agent harness for an AI-native revamp of Renude's skincare assistant: a browser-side agent loop on the OpenAI Responses API orchestrating 27 client-side tools, streamed over SSE via a stateless Vercel proxy.
- Built grounding and reliability into the harness: cards emitted by tool runs so no figure comes from model prose, measured provenance of the profile fields each tool read, and retry-then-fallback to a deterministic offline intent router.
- Hardened the server with server-owned prompts and tool schemas, input validation, and per-IP rate limits; added voice input.
- Shipped as a Shopify-style plugin behind a two-file adapter and kill switch, with ranking, compatibility, and rule engines (React 19).

Giving Connection — Stanford, CA
Platform Development & ML Intern — Jun 2025 – Aug 2025
- Built and shipped to production Smart Match, a hybrid recommender: rule filters, bge-large-en-v1.5 dense retrieval (1024-d), and re-ranking with 26 config-driven attribute rules; cut Time-to-Success by 80% for 15,500+ users.
- Wrote the Python embedding ETL over 928 nonprofits (regex section extraction, batched inference) and a Ruby/Python bridge into Rails 7.2, with synonym query expansion, explainable match reasons, feedback capture, and a PostGIS fallback.

Kuri Saúde — São Paulo, Brazil
Product Analyst — Feb 2023 – Jul 2023
- Co-led AI adoption across OCR, computer vision, and LLMs; built an OCR and LLM pipeline for contract intelligence that cut workflow time by 90% and operational costs by 80%.

PROJECTS

Nura — Stanford, CA
Beauty-Tech Embodied AI Hardware
- Designed end to end a countertop device that scans skin and doses eight NFC-tracked active cartridges into a personalized serum and moisturizer, leading industrial design, schematics, and BOM.
- Ran 100+ user and expert interviews to define requirements, user flows, and interaction design for the device UI and app.
- Designed and built the companion app (UX flows, UI, design system) personalizing routines from HealthKit biomarkers (sleep, stress, HRV), environmental data, and skin scans.
- Built on-device 3D skin reconstruction (structure from motion, ~1M-primitive Gaussian model) that measures five skin layers against the user's own baseline, with ML confined to personalization and dosing kept deterministic in firmware.

Fairness-Aware Cosmetics Recommendation — Stanford, CA
Course Project under Andrew Ng
- Fine-tuned a ResNet50 for six-class Fitzpatrick classification on Fitzpatrick17k (12K) and FairFace (100K+) to reduce tone bias.
- Reached 37.3% accuracy (16.7% baseline) and ranked 8,500 Sephora products with skin-type-conditioned weights.

LEADERSHIP

Girl Up (D&D Chapter) — Brazil
Founder — Jan 2021 – Dec 2024
- Led a 25-person team improving the wellness of 18M+ women and girls through a menstrual pads program, 4 educational programs, and 3 nationwide campaigns, driving 50+ proposed bills and 1 approved national bill.
- Built partnerships with Meta, TikTok, Twitter, Greenpeace, the Brazilian Superior Electoral Court, and Ben & Jerry's.

SKILLS

AI & ML: Harness engineering, LLM agents, tool calling, grounding, dense retrieval, ranking, recommender systems, computer vision
LLMs: OpenAI (Ada, Babbage, Curie, Davinci, GPT-3.5, GPT-4, GPT-4o, GPT-4o-mini, GPT-5.x), Claude, Gemini, Llama
Engineering: Python, TypeScript, React, Node, Rails, PostgreSQL, PyTorch, sentence-transformers, C++, Swift, Vercel, Git
Product: Discovery, user research, usability testing, prototyping, roadmapping, product analytics
